Overview

Computer science graduate with experience in software engineering, test automation, and data workflow automation across aerospace, healthcare, enterprise storage, and higher education environments. Interested in AI, analytics, and automation-focused roles.

Education

The University of Tennessee, Knoxville
Bachelor of Science: Computer Science
Minors: Machine Learning, Business Administration

Graduation: **May 2024**
GPA: **3.74/4.00**

Technical Skills

Languages: Python, C, C++, C#, JavaScript, SQL

Tools & Frameworks: Flask, MongoDB, Git, DOORS, Jira, Jenkins, MATLAB, Figma, Microsoft Excel

Technologies: Agile/Scrum, Test Automation, APIs, Prompt Engineering

Technical Highlights

- Built Python tools for automating Excel and CSV data workflows
- Experience with test automation in enterprise Linux environments
- Familiarity with Agile/SCRUM development practices and CI workflows
- Exposure to AI prompt engineering and chatbot optimization

Professional Experience

Pellissippi State Community College

Stay Strong Center Data Clerk

Sept. 2025 – Present

- Developed and documented Python scripts to automate repetitive data-processing tasks, improving workflow efficiency
- Cleaned, structured, and analyzed student datasets in Excel, producing reports and visualizations to support program evaluation and decision-making
- Improved the center's Gravyty chatbot by identifying and resolving gaps in its web-scraped knowledge base prior to launch
- Utilized the Navigate360 higher education CRM to manage student data and assign at-risk students to academic counselors and success coaches

iXsystems (dba. TrueNAS)

Test Automation Engineering Intern

Jan. 2025 – Aug. 2025

- Developed automated test suites to validate functionality of enterprise storage infrastructure using the TrueNAS platform, improving regression testing coverage and reducing manual QA effort
- Designed and maintained Python test scripts for Debian-based systems, ensuring consistency across hardware configurations
- Collaborated with engineering teams to document results and refine test processes, contributing to more stable release cycles and faster validation
- Assisted in analyzing test failures, logging defects, and coordinating with developers to resolve issues efficiently

Boston Scientific

Urology Research and Development Intern

June 2023 – Aug. 2023

- Worked on an exploratory R&D project that involved refining the software infrastructure and overall capabilities of a kidney stone robotic platform
- Set up, ran, and documented test method experiments with 7 DOF Kuka robot arm and flexible ureteroscope to quantify the repeatability and accuracy of the system
- Experimented with ChatGPT to augment a training document to facilitate faster onboarding learning of urology kidney stone procedures and surgical instruments

Collins Aerospace

Software Engineering Intern

June 2022 – Jan. 2023

- As a developer on a SAFe Agile SCRUM team, wrote and documented C++ code for product software application controlling radios on the C-130, MH-65E, MH-60T, and HC-144
- Received and implemented peer review feedback of C++ code held to company coding standards through a formal process derived from DO-178
- As part of the team, organized and executed production qualification testing including test stand cataloging, executing, and dispositioning tests
- Contributed to software inference design documentation by updating various sections
